

Create a patient

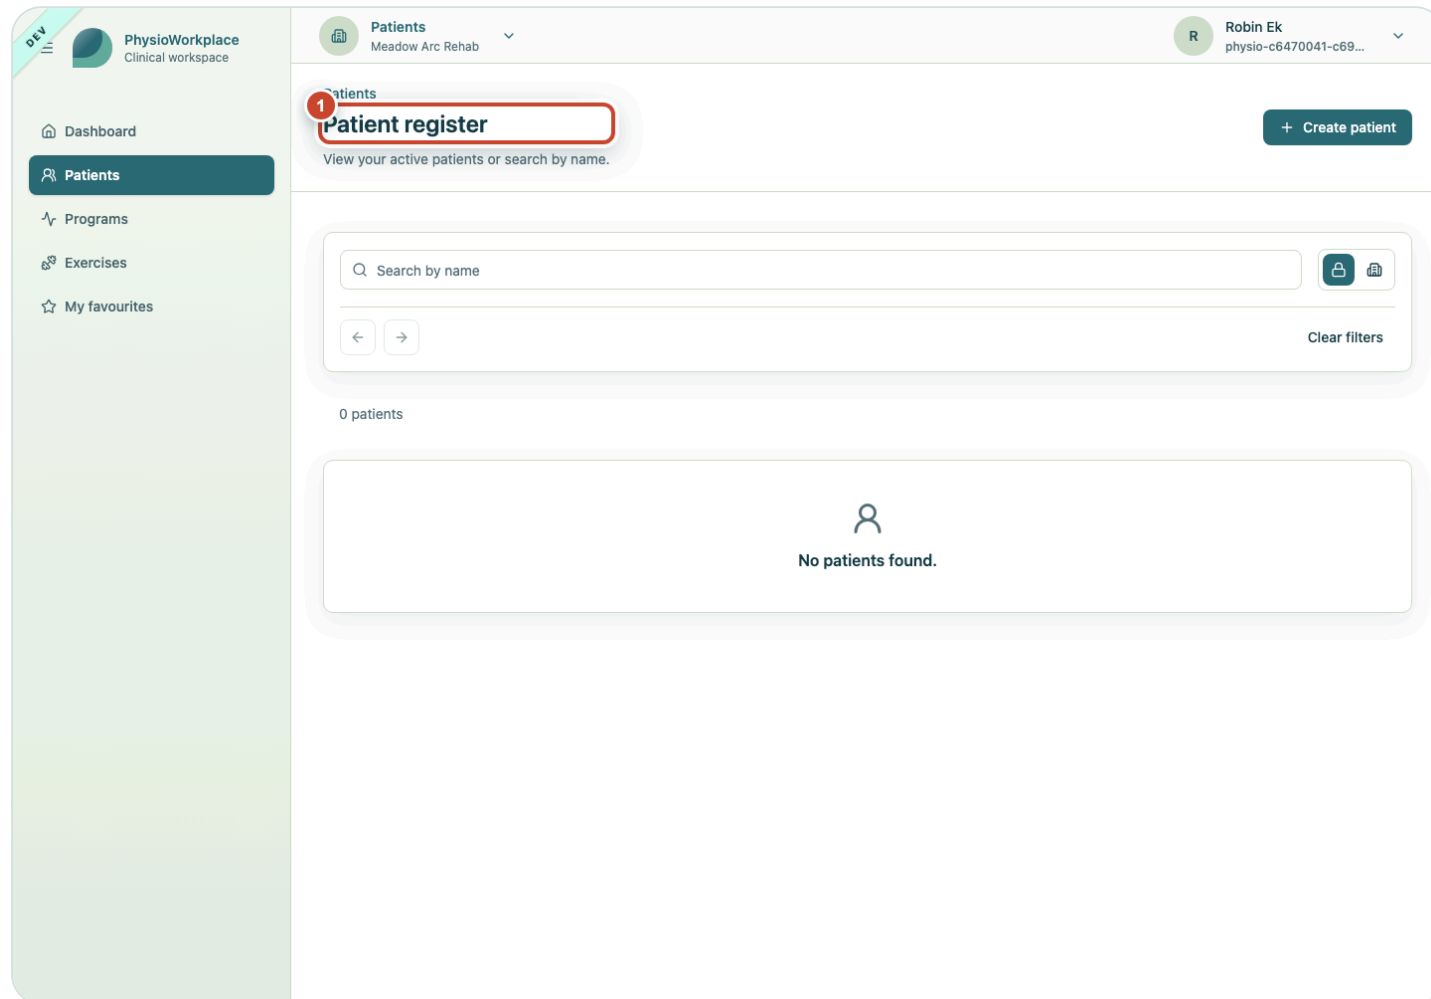

Add a patient to the active workplace's patient register.

1

Open the patient register

Where you are: The patient register shows patients at your active workplace.

What to do: Check that you are working in the correct workplace before continuing.

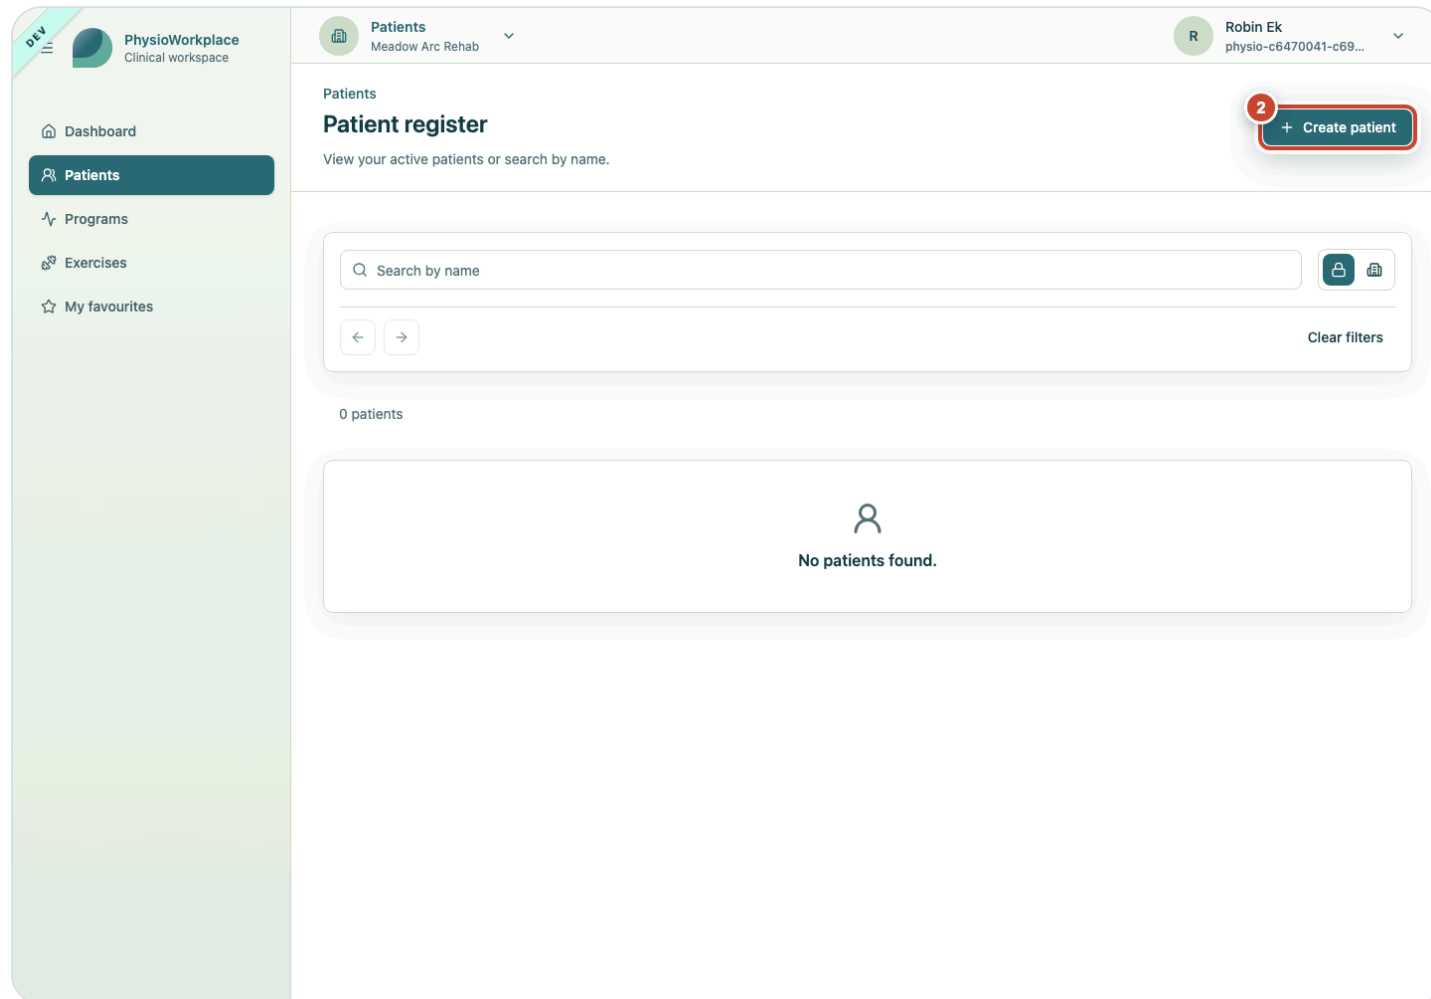

Complete when: The Patient register heading and Create patient button are visible.

2

Start creating the patient

Where you are: You are in the patient register.

What to do: Select Create patient.

Complete when: The new patient form opens.

3

Enter patient details

Where you are: The new patient form is open.

What to do: Enter the patient's first and last name, then review the details.

PATIENTS

Create patient

Create patient
Basic details can be expanded later.

First name
3 Alex

Last name
Lind

Personal identifier *
Select the issuing country and enter the patient's identifier.
SE 19121212-1212

☐ The patient has no supported identifier

No patient

Complete when: Both name fields contain the correct details.

4

Save the patient

Where you are: The patient details have been entered and reviewed.

What to do: Select Save.

The screenshot shows the 'Create patient' form in the PhysioWorkplace interface. The form is titled 'PATIENTS Create patient' and includes the following fields:

- First name:** Alex
- Last name:** Lind
- Personal identifier *:** SE (country code) and 19121212-1212 (identifier)

A red box highlights the '4' in the top right corner of the form, indicating the step number. The left sidebar shows the 'Patients' menu item selected.

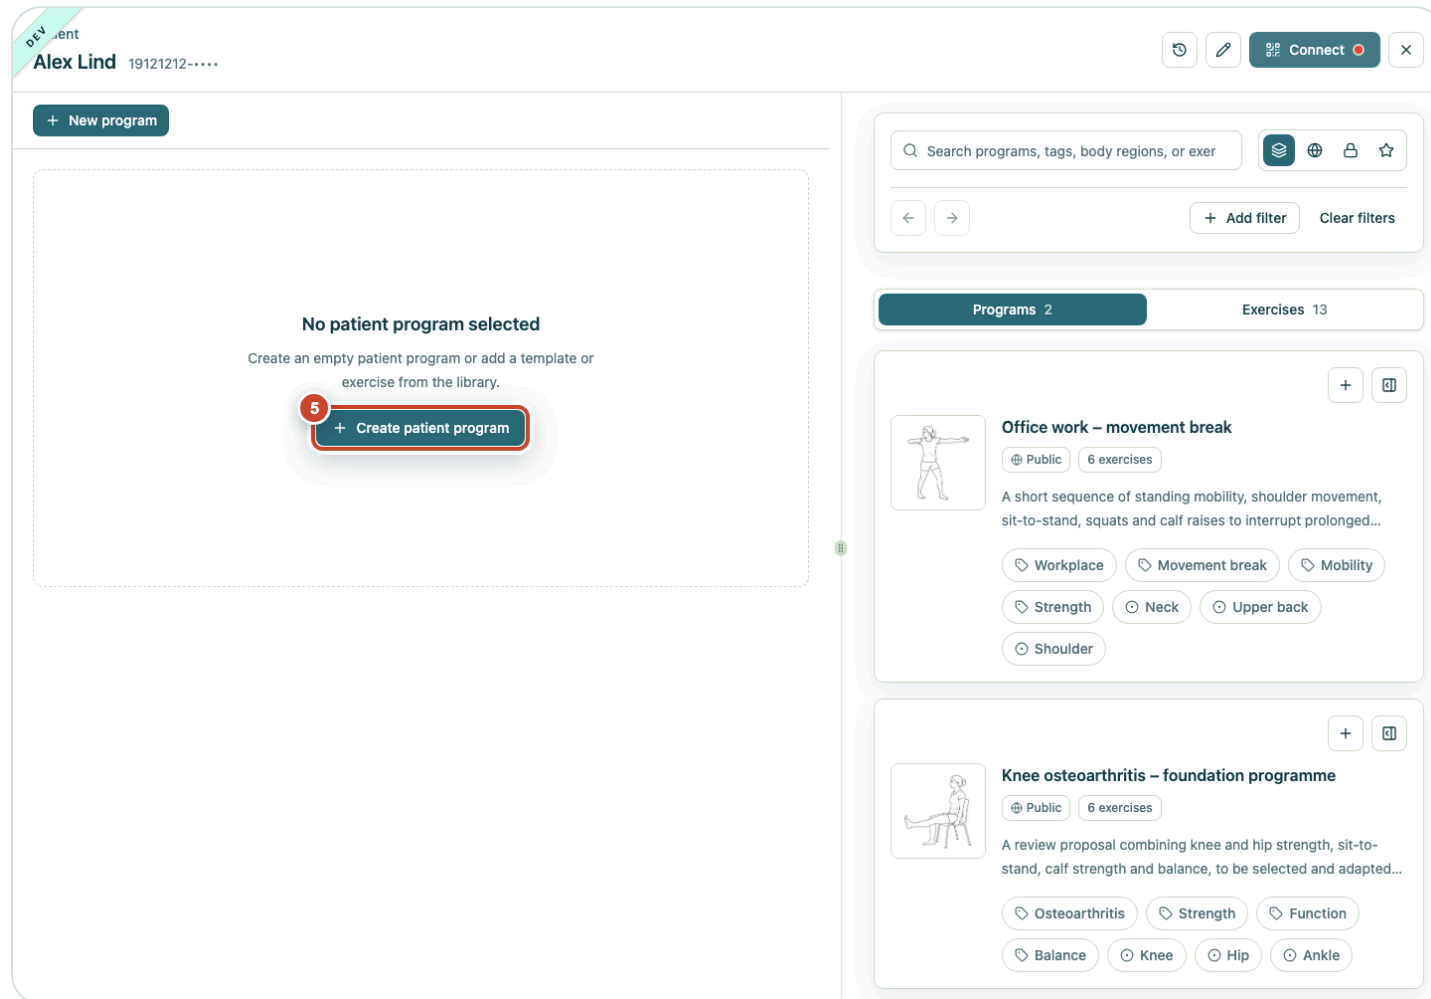

Complete when: The patient's page opens with their name at the top.

5

Create the patient's program

Where you are: The patient has been saved and their page is open.

What to do: Select Create patient program.

Complete when: An empty patient program opens.
