

Update a delivered patient programme

Change a delivered programme, send the update, and confirm the latest version.

1

Add an exercise

Where you are: The patient's delivered programme is open.

What to do: Add the required exercise from the library.

The screenshot displays a software interface for managing patient programs. On the left, the 'Patient program' section for 'Alex Lind' shows a 'Knee rehabilitation' program. The program title is 'Knee rehabilitation' and the description is empty. Below this, a list of exercises is shown, with the first one being 'Bridge with elastic band'. This exercise is illustrated with two images of a person performing the movement. The instructions for the exercise are as follows:

- 1 Lie on your back with your knees bent and feet hip-width apart. Place the band around your thighs just above the knees. Keep your knees slightly apart and rest your arms on the floor.
- 2 Press your feet into the floor and lift your hips. Keep your knees slightly apart and lift until your body forms a straight line from shoulders to knees. Lower your hips slowly again.

On the right, the 'Library' section allows searching for exercises by title, tags, body regions, or instructor. It features a search bar, filter buttons, and a list of exercises. Two exercises are visible:

- Clamshell**: A side-lying hip-rotation exercise. It is marked as 'Public'. The description states: 'Side-lying hip-rotation exercise in which the upper knee opens while the heels stay together and the pelvis remains stable.' Tags include 'Clamshell', 'Hip', 'Thigh', and 'Trunk'.
- Cat Camel**: A quadruped spinal movement. It is also marked as 'Public'. The description states: 'Quadruped spinal movement alternating between distinct flexion and extension while both hands and knees remain fixed as support.' Tags include 'Quadruped spinal flexion and extension', 'Upper back', 'Lower back', and 'Pelvis'.

Complete when: The exercise appears in the patient programme.

2

Review the changes

Where you are: The programme now differs from the delivered version.

What to do: Check the added exercise and any patient-specific text.

+ New program

Knee rehabilitation  x

- 1 Lie on your back with your knees bent and feet hip-width apart. Place the band around your thighs just above the knees. Keep your knees slightly apart and rest your arms on the floor.
- 2 Press your feet into the floor and lift your hips. Keep your knees slightly apart and lift until your body forms a straight line from shoulders to knees. Lower your hips slowly again.

+ Ange dosering

2 **Cat Camel**  

All-fours back exercise that alternates between a rounded and gently arched back.

- 1 Start on all fours with your hands under your shoulders and knees under your hips. Round your back upward and let your head drop.
- 2 Lower your back gently and lift your chest. Look up carefully without moving your hands or knees. Then round your back upward again.

+ Ange dosering

3

Send the update

Where you are: The programme changes are ready.

What to do: Select Send update.

The screenshot displays a web application for managing patient programs. At the top, the user is identified as 'Alex Lind'. Below this, there's a header with '+ New program' and a dropdown menu currently showing 'Knee rehabilitation'. The main content area is divided into two sections. The left section, titled 'Patient program', contains instructions on how to edit the program and a 'Send update' button, which is highlighted with a red circle and a red '3' indicating it's the next step. Below this is a form for 'Program title' (currently 'Knee rehabilitation') and 'Program description'. The right section shows a list of exercises. The first exercise is 'Bridge with elastic band', which includes an illustration and a two-step instruction: 1. Lie on your back with your knees bent and feet hip-width apart. Place the band around your thighs just above the knees. Keep your knees slightly apart and rest your arms on the floor. 2. Press your feet into the floor and lift your hips. Keep your knees slightly apart and lift until your body forms a straight line from shoulders to knees. Lower your hips slowly again. The second exercise is 'Clamshell', described as a side-lying hip-rotation exercise. The third exercise is 'Cat Camel', described as a quadruped spinal movement. Each exercise card includes an illustration, a description, and filter buttons for body regions like 'Hip', 'Thigh', 'Trunk', 'Upper back', 'Lower back', and 'Pelvis'. A 'Connect' button is visible in the top right corner.
